

# Pangenome mapping enhances genotype-phenotype associations in BXD mouse family

**Flavia Villani**  
Ph.D candidate

Medical College of Wisconsin, Milwaukee, USA

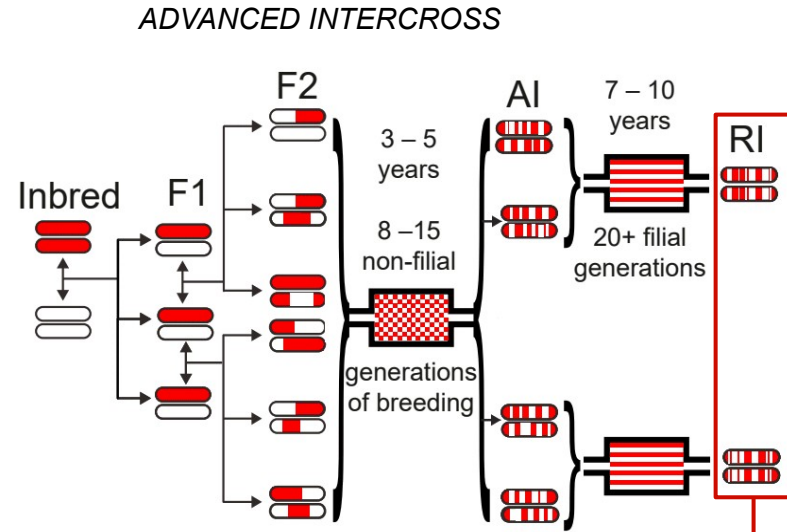

eQTL mapping in the BXD mouse family

# The extended BXD mouse family

C57BL/6J (mother) → **B X D** ← DBA/2J (father)

Whole Genome Sequencing  
10X Linked reads

Ashbrook, D. G., et al. *Cell Systems* (2021)

Mulligan, Megan K., et al. *Systems Genetics*. (2017)

# Expression QTL mapping in BXD mice

- 155 BXDs strain
- 21M mapped quantitative traits

The screenshot shows the GeneNetwork website interface. At the top, the logo 'GeneNetwork' is displayed with the text 'University of Tennessee: www.genenetwork.org' below it. A navigation bar contains links: Home, Search, Help, News, References, Policies, and Links. The main section is titled 'Select and Search'. It features several dropdown menus: 'Species' set to 'Mouse', 'Group' set to 'BXD', and 'Type' set to 'Hippocampus mRNA'. There is an 'Info' button next to the 'Group' dropdown. Below these, the 'Data Set' dropdown is set to 'Hippocampus Consortium M430v2 (Jun06) PDNN', also with an 'Info' button. A note states: 'Databases marked with \*\* suffix are not public yet. Access requires user login.' The 'Get Any:' field contains the text 'Grin2b'. Below this field, instructions read: 'Enter terms, genes, ID numbers in the Get Any field. Use \* or ? wildcards (Cyp\*a?, synap\*). Use Combined for terms such as tyrosine kinase.' At the bottom, there is a 'Combined:' field and three buttons: 'Search', 'Make Default', and 'Advanced Search'.

Remap eQTL using genetic markers derived from the pangenome graph

# Pangenomics

# A pangenome is just a set of sequences...

>ATCTCTCGTAACACTGTCAGTCAGTCA

>ACTCTCATTGTGTCCCTGTACTGTCTG

>CGTGCTGCTGATCGGGGTGCTGGCTAG

>CGTGCTGATTGTCGTGGGCTGTAGGTG

...but pangenomics is a paradigm shift in genomics

Application to eQTL mapping

## Standard approach

### Genotype matrix

rsID	A1	A2	Ind1	Ind2
rs3144	A	T	1	0

### Phenotype matrix

ID	Value
Ind1	1.2
Ind2	2.3

### Marker map

rsID	Pos	Chr
rs3144	1200	1

**GEMMA: Genome-wide  
Efficient Mixed Model  
Association** 

## Standard approach

Genotype matrix

rsID	A1	A2	Ind1	Ind2
rs3144	A	T	1	0

Phenotype matrix

ID	Value
Ind1	1.2
Ind2	2.3

eQTL mapping

## Pangenomic approach

Matrix of mapped reads

Node	A1	A2	Ind1	Ind2
N1	A	A	1	2

Phenotype matrix

ID	Value
Ind1	1.2
Ind2	2.3

Marker map

Node	Pos	Chr
N1	10	1

# A very strong signal as a positive control

# A very strong signal as a positive control

*Cacna1e*  
gene expression  
(spleen)

# *Cacna1e* gene (chr1)

*Cacna1e* encodes an integral membrane protein that belongs to the calcium channel alpha-1 subunits family.

# Signal replication for *Cacna1e* on chromosome 1

Standard  
approach

# Signal replication for *Cacna1e* on chromosome 1

Standard  
approach

Pangenomic  
approach

# Signal replication for *Cacna1e* on chromosome 1

Standard  
approach

Pangenomic  
approach

# Conclusions

- Pipeline for deriving genotype markers mapping short-read against pangenome graphs
- Application to eQTL mapping in BXD

## Future directions

- Apply quality filters
- Manage repeats
- Extend the analyses to all traits in GN
